

Basement Waterproofing

Method of Application:-

a) Surface preparation : The surface to be coated must be solid and clean, free of all traces of paints, coatings, efflorescence, loose particles, grease, oil, demoulding agents, dust, gypsum plaster, etc. Remove by water pressure cleaning.

b) Mixing: Mix just with water between 6 and 7 litres per each 25 kg bag. Applications made at high temperatures, the water ratio can be increased slightly.

c) Application of Techcryst Super: TECHCRYST SUPER should be applied with a fibre type brush. Apply a thick layer to form a continuous and uniform coating; do not spread as if it were paint, apply only in one direction. Consumption is about 1 kg/sq. m for 1 coat.*

d) Dusting of TECHCRYST SUPER After placement of reinforcement bars, TECHCRYST SUPER is dusted on the reinforcement bars 1 hour prior to the pouring of the concrete. Before dusting the waterproofing material, the lean concrete should be dampened until a saturated surface dry condition is achieved and then, TECHCRYST SUPER will be spread in powder form at consumption of 0.5 kg/ sq.m. So, the product is stocked on the concrete lean and also on the surface of the steel reinforcement. This step helps in curbing the problem of rising dampness.

Why Click Zippy?

- **ASSURITY**
if any Mistake done by our professional then we can give again best services is free of cost after surety of wrong services.
- **Service totally done by trained professionals within time limit that means fast services.**
- **Professional service is affordable rate so you can satisfied your need.**
- **We are based on application and website so Customer can book online services at their place and get services at doorstep.**
- **Easy comparison of Qualitative services and their rate.**
- **Broad category of services we have.**
